UNIT III: CAREER FOCUS

Objectives: 1) Entry Level Careers: what do you want to do? where do you want to go ? jobs versus career starting at the bottom and working to the top 2) Broadening students' vision of career opportunities career fields and details (library research) 3) Exploring career opportunities - in Cambodia / internationally - further education a) advanced degrees (Master's, Ph.D.) b) available scholarships c) TOEFL 4) Choosing a Career a) aptitudes b) interests c) values 5) Planning Your Career - where to start and where to end

Spot the Difference

Match these terms with the correct definitions.

career, employment, job, occupation, position/post, profession, trade, vocation, work

1. the state of having a job

2. the series of job that a person has in a particular area of work, usually involving more responsibility as time passes

3. a type of work that you believe is suitable for you

4. business of buying and selling

5. job (usually seen in application forms)

6. a type of job that needs special training or skill, esp. one that needs a high level of education

7. doing regular tasks in order to earn money

8. regular paid employment

9. a job title in an organization, e.g. Receptionist, Secretary, Marketing Manager

Different Kinds of Jobs

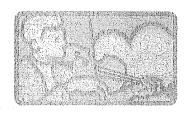

1. Listen to the tape	and fill in the blanks.	
There are many k	kinds of ¹ , but we	can ² them all into four
groups: farm jobs, 3	jobs, blue-collar jobs	, and white-collar jobs. 4
raise animals and 5	crops. They 6	food and sell it to others. In 1820,
⁷ percent of	the people in the United States	were farmers. Today, in our industrial
8, less than	3 percent of the people are far	mers.
People in a ⁹	job work for other pe	ople. They do 10 that other
people need or 11	As part of their job, th	ey ¹² meet the people they
serve. Service jobs inc	lude the police, ¹³	organizers, 14, cooks,
waiters and waitresses,		
15	in blue-collar jobs usually do a	great deal of manual ¹⁶
They have to use physic	cal skills to do their work. The	ese workers often ¹⁷ special
clothes. (In the past the	ey often wore blue shirts.) Sor	ne blue-collar workers are truck drivers,
carpenters, electricians,	, plumbers, and 18	workers.
People in white-	collar jobs often work in 19	, and they usually wear more
clothes ²	people in other j	obs do. Some examples of white-collar
workers are ²²	, bank clerks, ²³	, salespeople, and business managers.
Some white-collar jobs	require a college degree, and	these jobs are ²⁴ professions.
Some ²⁵ pr	ofessions are doctors, lawyers,	teachers, engineers, and accountants.
2. Read the article above	ve and complete this chart.	
Kind of workers	What they do	Examples
	·	
Farmers	·	
·		
	work for other people	
		Truck drivers,

Job Prestige

Determine the type of each job and indicate it in terms of prestige: high (H), medium (M), or low (L).

#	Job	Type of job	My ranking	My group's ranking	My class's ranking
1.	accountant	white-collar	M		
2.	actor/actress				
3.	barber/hairdresser

10. a travel agent or a tour guide?		
11. employed or self-employed?		
12. a civil servant, a company or an NGO worker?		

Work: Duties, Conditions and Pay

Read through A to D and do the exercises on the next page.

A. What do you do?

People may ask you about your job. They can ask and answer in different ways:

What do you do?

I'm (+ job) e.g. a banker / an engineer / a teacher / a builder, etc.

What's your job?

I work in (+ place or general area) e.g. a bank / marketing, etc.

What do you do for living? I work for (+ name of co.) e.g. National Bank of Cambodia / RUPP, etc. Note: 'Work' is usually an uncountable noun, so you cannot say 'a work'. If you want to use the indefinite

article you must say 'a job', e.g. She hasn't got a job at the moment.

B. What does that involve? (= What do you do in your job?)

When people ask you to explain your work/job, they may want to know your main responsibilities (= your duties / what you have to do), or something about your daily routine (= what you do every day/week). They ask like this: What does that (= your job) involve?

Main responsibilities

I'm in charge of (= responsible for) all daily deliveries out of the factory.

I have to deal with any complaints (= take all necessary actions if there are complaints).

I run the coffee bar and restaurant in the museum (= I am in control of it/ I manage it).

Note: We often use responsible for / in charge of for a part of something, e.g. a department or some of the workers; and run for control of <u>all</u> of something, e.g. a company or a shop.

Daily duties / routine

I have to go to / attend a lot of meetings.

I visit / see/ meet clients (= people I do business with or for).

I advise clients (= give them help and my opinion).

It involves doing quite a lot of paperwork (a general word we use for routine work that involves paper, e.g. writing letters, filling in forms, etc.). Note the --ing form after involve.

C. Pay

Most workers are paid (= receive money) every month and this pay goes directly into their bank account. It is called a salary. We can express the same idea using the verb to earn:

My salary is \$ 60,000 a year. (= I earn \$ 60,000 a year.)

With many jobs you get (= receive) holiday pay and sick pay (when you are ill). If you want to ask about holidays, you can say:

How much holiday do you get? or How many weeks' holiday do you get?

The total amount of money you receive in a year is called your income. This could be your salary from one job, or the salary from two different jobs you have. And on this income you have to pay part to the government - called income tax.

D. Working Hours

For many people in Britain, these are 8.30-9.00 a.m. to 5.00-5.30p.m. Consequently people often talk about a nine-to-five job (= regular working hours). Some people have flexi-time (= they can start an hour or so earlier or finish later): and some have to do shift work (= working at different times, e.g. days one week and nights the next week). Some people also work overtime (= work extra hours). Some people are paid to do/work over time, others are not paid.

	Career Focu
Exercises	
1. Match the verbs	on the left with the nouns or phrases on the right. Use each word once only.
1 earn	overtime
2 work	meetings
3 pay	a shop
4 go to	clients
5 deal with	£500
6 run	income tax
_	e words you are given, rewrite each of these sentences using vocabulary from
the opposite	page. The basic meaning must stay the same.
Example:	I'm a banker.
	I work
1 What do y	
2 I earn \$50,	
My	
	00 from my teaching job and another £10,000 from writing.
4 I am a che	nist.
I work for	
	have to look after and maintain all the computers in the building.
V 1/2	sible for one of the smaller departments.
•	
3. This is part of a questions?	conversation with a teacher about her job. Can you supply the missing
	?
	tart at nine and finish at four.
-	?
	On certain courses I work until five o'clock, and then I get paid extra.
	?
	eeks. That's one of the good things about being a teacher.
	n't, I'm afraid. That's one of the disadvantages of being a teacher. But I suppose
-	these general knowledge questions about work?
1 What are n	armal working hours for most office jobs in your country?

- - 1 What are normal working hours for most office jobs in your country?
 - 2 Can you name three jobs that get very high salaries in your country?
 - 3 When you start paying income tax in your country, what is the minimum amount you have to pay?
 - 4 What jobs often involve shift work? (Give at lease two examples.)
 - 5 Is flexi-time common in your company or your country?
- 5. Think about your own job. How many of the things on the last page do you do? How is your work different? Can you explain your responsibilities and daily duties in English?

The career ladder

Getting a job

When Paul left school he applied for (= wrote an official request for) a job in the accounts department of a local engineering company. They gave him a job as a trainee (= a very junior person in a company). He didn't earn very much but they gave him a lot of training (= organized help and advice with learning the job), and sent him on training courses.

Note: Training is an uncountable noun, so you cannot say 'a training'. You can only talk about training (in general), or a training course (if you want to refer to just one). Here you can use the verbs do or go on: I did / went on several training courses last year.

Moving up

Paul worked hard at the company and his prospects (= future possibilities in the job) looked good. After his first year he got a good pay rise (= more money), and after two years he was promoted (= given a higher position with more money and responsibility). After six years he was in charge of (= responsible for / the boss of) the accounts department with five other employees (= workers in the company) under him (= under his responsibility/authority).

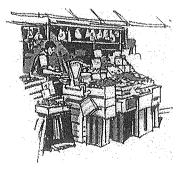

Leaving the company

By the time Paul was 30, however, he decided he wanted a fresh challenge (= a new exciting situation). He was keen to work abroad, so he resigned from his company (= officially told the company he was leaving his job; you can also say 'he quit the company⁵) and started looking for a new job with a bigger company. After a couple of months he managed to find a job with an international company, which involved (= included) a lot of foreign travel. He was very excited about the new job and at first he really enjoyed the traveling, but...

Hard times

After about six months, Paul started to dislike the constant moving around, and after a year he hated it; he hated living in hotels, and he never really made any friends in the new company. Unfortunately his work was not satisfactory either and finally he was sacked (= told to leave the company / dismissed / given the sack) a year later.

After that, Paul found things much more difficult. He was unemployed (= out of work / without a job) for over a year. He had to sell his car and move out of his new house. Things were looking bad and in the end Paul had to accept a part-time job

(= working only some of the day or some of the week) on a fruit and vegetable stall in a market.

Happier times

To his surprise, Paul loved the market. He made lots of friends and enjoyed working out in the open air. After two years, he took over (= took control of) the stall. Two years later he opened a second stall, and after ten years he had fifteen stalls. Last year Paul retired (= stopped working completely) at the age of 55, a very rich man.

1. Writ	te a single word	synonym for each of th	iese words/phrases.
	1 give the sack	=	
	2 out of work =	=	
	3 left the comp	any =	
	4 was given a b	petter position in the comp	pany =
•	5 future possib	ilities in a job =	,
	6 stopped work	ting forever =	
	7 workers in a	company =	
2. Find	the logical ans	wer on the right for eac	h of the questions on the left.
	3 Why did he a 4 Why did he r 5 Why did he r	promote him? upply for the job? etire?	a Because he was nearly 65. b Because he was late for work every day. c Because he needed more training. d Because he was out of work. e Because he was the best person in the department. f Because he didn't like his boss.
3. Com	plete these sent	tences with suitable wor	d or phrase.
	1 I don't want	a full-time job. I'd prefer	to work
	2 She'd like to	go on another training	······································
	3 I'm bored in	my job. I need a fresh	
	4 He works on	a stall in the	
	5 At the end of	this year we should get a	a good pay
	6 She's got mo	re than a hundred worker	s under
	7 I didn't know	he was the new manage	r. When did he take?
	8 It's a boring j	job and the pay is awful.	Why did he?
4. Com	plete this word	l-building table. Use a d	ictionary to help you.

If possible, ask another person the same questions. (Review!!!)

Careers

Careers. Many people use the term *career* to mean the job, occupation, or vocation a person has. However, a career involves much more than does a job, an occupation, or a vocation. A career is the pattern of work and work-related activities that develops throughout a lifetime. It includes the job or series of jobs a person has until retirement. There are as many kinds of careers as there are people. They vary greatly in the type of work involved and in the ways they influence a person's life.

Almost every adult has a career of some kind. Most people build a career to help them satisfy certain goals. Such goals might include earning a living or helping others. The best-known career pattern develops around work for pay. Most workers in such a career hold a job to support themselves and their family. However, some people build a career around activities for which they receive no money. For example, many people work to create a comfortable home life for their family. Others spend much of their time on charitable projects.

The kind of career you have can affect your life in many ways. For example, it can determine where you live and the friends you make. It can reflect how much education you have and can determine the amount of money you earn. Your career can also affect the way you feel about yourself and the way other people act toward you. By making wise decisions concerning your career, you can help yourself build the life you want.

Important career decisions include choosing a career field and deciding how you want your career to develop. Other decisions involve selecting the educational and job opportunities that will advance your career. Knowing your abilities, interests, and goals gives you a foundation on which

to base your career decisions. In addition, a broad knowledge of the world of work can help you find career possibilities that suit your abilities, interests, and goals.

This article deals mainly with careers based on work for pay. It concentrates on careers in the United States, but much of the material applies also to careers in Canada and other countries. The article provides information that can help you choose and plan a career. It also describes skills that can be useful in getting a job. In addition, the article discusses major career fields and many of the occupations within each field. For more detailed information on an individual career field, see the articles listed in the *related articles* at the end of this article.

Duane Brown, the contributor of this article, is Professor of Education at the University of North Carolina at Chapel Hill. He is the coauthor of the books Career Choice and Development and Career Counseling Techniques.

☐ Choosing a Career

To make wise career decisions and plans, you need as much information as possible. The more you know about yourself and career opportunities, the better able you will be to choose a satisfying career.

Learning about oneself. People differ in what they want from a career. Many people desire a high income. Some hope for fame. Others want adventure. Still others want to serve people and make the world a better place.

Before you begin to explore career fields, you should determine (1) your values; (2) your interests; and (3) your aptitudes. Most people are happiest in jobs that fit their values, interests, and aptitudes.

Values are deeply held beliefs that influence the way people think, act, and feel. They reflect what people consider to be important and greatly affect the goals people set for themselves. Each person has many values, which vary in strength. For example, money is the strongest value for some people—that is, wealth is more important to them than anything else. As a result, they focus their thoughts, behavior, and emotions on the goal of earning a high income. Other values include devotion to religion, taking risks, spending time with family, and helping others. People should understand their values prior to making a career decision.

You can develop an understanding of your values by asking yourself what is most important to you and by examining your beliefs. For example, is it important to you to work as a member of a team? Or would you rather be in charge or work alone? If working alone or being in charge is important to you, independence is probably one of your primary values.

You can also learn about your values with the aid of experts known as career and guidance counselors. Through tests and questions, a counselor can guide you toward developing a detailed list of your beliefs. The counselor can then assist you in determining what careers best match these values.

Interests are related to values and typically are defined as likes or preferences. The subjects that you like in school and the leisure activities you prefer are indications of your interests. For example, someone who prefers working with others rather than alone would probably be interested in team sports or various other group activities. Many people have interests in artistic, mechanical, outdoor, or scientific activities. Other interests include helping people and solving problems.

Many people base their career choices on their interests. For numerous workers, job performance and job satisfaction depend on how much their work relates to their interests. It is therefore helpful to identify your strongest and most lasting interests before you select a career field. To find out what your interests are, examine the kinds of activities you have enjoyed. Such activities might include club work, hobbies, and sports. The activities you enjoy most may represent your strongest interests. Counselors can also help you identify your interests.

Aptitudes are a person's natural talents. Aptitudes indicate how easily a person can acquire certain skills or be trained for a specific career. An aptitude is sometimes known as an *ability*. However, the term *ability* can also refer to a skill—such as reading or speaking a foreign language—that a person has learned.

One of the most important aptitudes is *scholastic aptitude*. People who have high scholastic aptitude tend to succeed more easily in school than those who do not. Scholastic aptitude plays a major role in determining a person's career choice.

Many special aptitudes besides scholastic aptitude are related to success in various jobs. For example, people with clerical speed and accuracy aptitude can develop skill in recording and organizing information. Mechanical reasoning aptitude can help you acquire mechanical concepts that relate to repairing and assembling machines. People with manual dexterity aptitude can learn to use their hands skillfully and quickly in manual tasks. Spatial relations aptitude can help you imagine objects in two and three dimensions. People with numerical reasoning aptitude can easily become skilled in using numbers in problem solving. Thinking and reasoning with words involves verbal reasoning aptitude. Abstract reasoning aptitude can help you reason with symbols other than words and numbers.

Before you make a career choice, you should determine if performing that job requires any special aptitudes. To succeed in engineering, for example, you should have aptitudes for verbal reasoning, numerical reasoning, and spatial relations.

Performance on aptitude tests and in various school subjects are good indicators of aptitude. How well you do in recreational activities, such as playing computer games or building model airplanes, may also indicate aptitude.

However, you should remember two important factors about aptitudes. First, people may not realize they have certain aptitudes unless they are given the opportunity to develop them. For example, people once believed that women had less aptitude to learn mathematics than men did. As a result, women were discouraged from taking mathematics courses. However, it is now known that women can learn mathematics as effectively as men. Second, if you have relatively low aptitude in a given area, you can still develop the skills and abilities needed to perform successfully in that area. For example, people with low mechanical aptitude can learn to skillfully perform mechanical tasks. However, they may have more difficulty in learning mechanical skills and concepts than they would if they had mechanical aptitude.

Other personal characteristics, such as friendliness, dependability, and honesty, contribute to success in a career. They may even be essential elements of a career in sales, banking, management, or other fields. These kinds of characteristics are difficult to measure. However, a serious look at your past behavior can help you find out if you have such qualities

Answer the following questions about the section "Choosing a Career."

1. To	make wise career decision	s and plans, what do you	ı need?	
2. To	choose a satisfying career,	what 2 things must you	know about?

Which Career Is the Right One for You?

David P. Cambell

More than anything else, your choice of career is going to determine how you live – and probably even where you live. The following article, excerpted from Dr. Cambell's book, If You Don't Know Where You're Going, You'll Probably End Up Somewhere Else, should help you see yourself from a different angle.

When you are trying to plan your career, try out a variety of jobs, work in many different settings, volunteer for different tasks.

There are six basic categories of occupations. The six types of jobs, as developed by Professor John L. Holland, a psychology professor from Johns Hopkins University, are described here in some detail. Recognize that when I talk about the characteristics of people in the jobs, no one person has all of these characteristics. I am talking about trends, but they are strong trends.

TYPE A - REALISTIC JOBS

These are mainly skilled trades or technical jobs, usually involving work with tools or machines, frequently called "blue-collar" positions.

People who are attracted to realistic jobs are usually rugged, robust, practical, physically strong and frequently competitive in outlook. They usually have good physical condition, but sometimes they have trouble expressing themselves in words or in talking with others. They prefer to deal with things rather than with ideas or with people. They enjoy creating things with their hands. They have good motor coordination, but they are frequently uncomfortable in social settings, and lack verbal and interpersonal skills. They usually see themselves as mechanically and athletically inclined and are stable, natural and persistent. They prefer concrete to abstract problems. Realistic people tend to see the world in simple, tangible and traditional terms. Possessions are important to them, and they usually put their recreational money into cars, boats, campers, snowmobiles, motorcycles, airplanes or other machinery.

Realistic people describe themselves in interviews as "conforming, frank, genuine, normal, persistent, practical, stable, thrifty, materialistic, shy and uninvolved."

One unique reward of most realistic jobs is that the worker can quickly see the results of her labors.

In general, in realistic jobs, life is not complicated by intricate problems between people or organizations, nor by troublesome choices between conflicting philosophies.

TYPE B - CONVENTIONAL JOBS

These are usually office jobs where people work with organizations, files and regular schedules.

Conventional occupations include bookkeeper, statistician, bank teller, inventory controller, payroll clerk, secretary, financial analyst, office manager, computer operator, bank cashier and accountant. Conventional jobs usually require a fair amount of writing, but it is usually the writing of business letters and regular reports.

People who enjoy conventional jobs describe themselves as "conforming, conscientious, efficient, inhibited, obedient, orderly, persistent, practical and calm."

They like for life to be orderly and to go according to plan. They like to know what is expected of them, and they enjoy carrying out their assignments.

Conventional people prefer the highly ordered activities, both verbal and numerical, that characterize office work. They dislike ambiguity and prefer to know precisely what is expected of them. They describe themselves as "conventional, stable, well-controlled and dependable." They have little interest in problems requiring physical skills or intense relationships with others and they are more effective at well-defined tasks. They value material possessions and status, although they usually prefer conforming and subordinate roles.

The rewards of working in conventional jobs center around seeing offices and organizations run smoothly, and in understanding how the individual contribution helps in making that happen.

People in conventional positions are frequently the glue that holds the entire operation together. Because of the nature of their work, they are not always publicly recognized as much as perhaps they should be, but they themselves have some appreciation of the contribution they are making to the organization, and this is one of the pleasant aspects of conventional occupations.

TYPE C - INVESTIGATIVE JOBS

These are scientific and laboratory jobs, jobs where people investigate how the world is put together.

The tasks involved in investigating jobs are scientific or laboratory in nature, and usually involve trying to solve some puzzles, whether the puzzle is a large, mysterious problem such as how the universe came into being, or a more normal, daily problem such as figuring out the composition of a sample of blood taken from a patient in a medical clinic.

Investigating workers are usually found in research laboratories or clinical settings, but they also work in a wide range of other places – highway departments where they study issues such as traffic control and composition of highway materials; in advertising agencies where they work on market surveys; in food-producing companies where they work on nutritional aspects of food; in military settings where they work on new weapons or new military strategies; in financial departments where they work on questions of economic strategy, money flow and inventory problems – in general, in any place where problems are being attacked in a systematic, scientific way.

Investigating tasks frequently involve the use of computers, microscopes, telescopes, high-speed centrifuges or any of an incredible array of other laboratory and scientific equipment. The investigative job differs from the realistic job in that the realistic job is usually more concerned with machines that produce products, while the investigative job is concerned with machines that produce data or information.

People in investigative jobs are task-oriented, which means they get all wrapped up in the problem they are working on. They sometimes perceive themselves as lacking leadership or persuasive abilities, but they are confident of their scholarly and intellectual abilities.

They prefer to think through problems rather than act them out. They enjoy ambiguous challenges and do not like highly structure situations with lots of rules. They frequently have unconventional values and attitudes and tend to be original and creative, especially in scientific areas.

They describe themselves as "analytical, curious, independent and reserved." They especially dislike repetitive activities and sales activities. They are very curious.

The unique reward of many investigative jobs is the worker's opportunities to satisfy an innate curiosity, analyzing situations, trying to understand what is going on in whatever field they are working.

TYPE D - ARTISTIC JOBS

Theses are creative jobs where people work with words or music or art.

The tasks involved in artistic occupations usually involve working with words, music or other art forms. Decorating rooms, designing homes or doing portrait photography are other examples of artistic activities.

Artistic jobs are found in settings such as art museums, art galleries, music departments, interior decorating offices, music stores, theater groups, photographic studios, radio and television studios and any other place where artistic skills are used and/or taught.

People who enjoy working in artistic jobs describe themselves as "complicated, disorderly, emotional, idealistic, imaginative, impractical, impulsive, independent, introspective, intuitive, nonconforming and original." They like to work in free environments that allow them to express themselves in a wide variety of media – writing, music, drawing, photography, fabrics – in general, any art form.

They value beauty and aesthetic qualities, and don't care much of social entanglements. They like to make things, especially new and different things, and are willing to take risks to try something new, even if the chances of failure high.

The artistic person has the distaste for appearing conventional or undistinguished. Such people like to use their creativity to help them stand out from the crowd.

Artistic people have little interest in problems that are highly structured or that require a lot of physical strength, preferring those problems that can be dealt with self-expression and artistic media. They resemble investigative people in preferring to work alone, but have a greater need for

individualistic expression, are usually less assertive about their own capabilities, and are more sensitive and emotional.

The continual stimulation for the new and the different, for quality in creativity, is a primary reward of artistic jobs.

TYPE E - SOCIAL JOBS

These are jobs where people work with people – healing them, teaching them, helping them.

The tasks involved in social jobs are those concerned with working with other people, teaching them, or training them, or curing them, or leading them, or organizing them or enlightening them. Social tasks include explaining things to others, entertaining other people, planning the teaching of other people, helping other people solve their difficulties, organizing and conducting charities, and straightening out differences between people.

People who enjoy working in social jobs describe themselves as "cooperative, friendly, generous, helpful, idealistic, responsible, social, tactful and understanding." They like to work in groups, especially small groups that are working on problems common to individuals in the group.

They dislike working with machines or in highly organized situations such as military units. They like to discuss philosophic questions – the purpose of life, what constitutes right or wrong.

They like attention and seek situations that allow them to be at or near the center of the group. They prefer to solve problems by discussions with others, or by arranging or rearranging relationships between others. Social people also describe themselves as "cheerful, popular, achieving and good leaders."

The rewards of working in social jobs center around the warm glow that comes from helping other people solve their problems or improve themselves. People in social jobs usually have coworkers who are like themselves, and these groups are usually warm and supportive of each other. They make each other feel wanted, have great respect for each other's abilities, and have many opportunities for close interpersonal relationships.

TYPE F - JOBS OF LEADERSHIP

These are jobs where people persuade other people to do something – sales jobs, political jobs, merchandising jobs.

Also included are many business executive jobs, making speeches, running for an elected office, heading up a fund-raising campaign and many other jobs of leadership, as well as taking a course in leadership development.

Other examples of jobs of leadership include public relations directors, stock and bond brokers, buyers, hostesses, retailers, fashion merchandisers and industrial consultants.

People who enjoy working in jobs of leadership describe themselves as "adventuresome, ambitious, argumentative, domineering, flirtatious, impulsive, optimistic, self-confident, sociable and talkative."

Such people enjoy competitive activities and like to work in groups where they can have some influence over what the group is doing. They are self-confident and usually see themselves as good leaders.

Generally, such enterprising people dislike science and systematic thinking.

People in leadership jobs usually have a great facility with words, which they put to effective use in selling, dominating and leading. They are impatient with detail work or work involving long periods of heavy thinking. They have strong drives to organizational goals or economic aims. They see themselves as aggressive, popular, self-confident, cheerful and sociable. They generally have a high energy level and lots of enthusiasm.

The unique reward from jobs of leadership is the sense of achievement that comes from making things happen, whether it is conducting a sales campaign, or winning an election, or persuading a board or directors to accept new policies.

Find the job That's Right for You!

How would you look for a job that's right for you?

early 50% of all workers have jobs they aren't happy with. Don't let this happen to you! If you want to find the right job, don't rush to look through the ads in the newspaper. Instead, sit down and think about yourself. What kind of person are you? What makes you happy?

According to psychologist John Holland, there are six types of personalities. Nobody is just one type, but most people are mainly one type. For each type, there are certain jobs that might be right and others that are probably wrong.

- The *Realistic* type is practical and likes working with machines and tools.
- The *Investigate* type is curious and likes to learn, analyze situations, and solve problems
- The Artistic type is imaginative and likes to express him/herself by creating art.
- The Social type is friendly and likes helping or training other people.
- The Job of Leadership type is outgoing and likes to persuade or lead other people.
- The Conventional type is careful and likes to follow routines and keep track of details.

If you think about who you are, you can make the right job decision. Liz is a good example. Liz knew she wanted to do something for children as a school counselor or a lawyer. She took counseling and law courses — and hated them. After talking to a career counselor, she realized the problem was that she's an Artistic type. Liz studied film, and she now produces children's TV shows — and loves it.

caon person	ality type. Then exp	piani youi answei	s to a partiter.		

- □actor □ accountant ☐ painter ☐ detective ☐ carpenter □ doctor ☐ computer □ bookkeeper ☐ manager □ model ☐ factory-□ nurse worker programmer ☐ inventor □ politician ☐ mechanic ☐ writer ☐ psychologist □ photographer □ secretary □ salesperson □ researcher ☐ reporter ☐ teacher
- ♣B. Pair Work Talk about the following questions.
 - 1. Which personality type are you most similar to?
 - 2. What kinds of jobs do you think would fit your personality?
 - 3. Can you think of someone who has the right job for his or her personality? Explain why.

\square Read

Reading About Career Trends. As you read the following selection, think about the answer to this question: what are some ways in which work is changing? Read the following selection quickly. Do not use a dictionary. Then do the exercises that follow the reading.

__Changing Career Trends

[1] A hundred years ago in most of the world, people didn't have much choice about the work that they would do if their parents were farmers, they became farmers. The society—and tradition—determined their profession. Twenty years ago in many countries, people could choose their livelihood. They also had the certainty of a job for life, but they usually couldn't choose to change from one employer to another or from one profession to another. Today, this is not always - the case. Career counselors tell us that the world of work is already changing fast and will change dramatically in the next twenty-five years.

[2] Job Security

Increasingly, people need to be prepared to change jobs several times in their lifetime. The situation varies from country to country, but in general there is less job security worldwide. In Europe, the unemployment rate is 10 percent, and many people have to accept part-time jobs while they wait to find full-time. Employment. The United States has the fastest-changing job market. In 1994, 6 million Americans quit their job to take a different post. In 1999, the number rose to 17 million. Even in Japan, where people traditionally had a very secure job for life, there is now no promise of a lifetime job with the same company

[3] The Effect of Insecurity

On the surface, it may seem that lack of job security is something undesirable. Indeed, pessimists point out that it is certainly a cause of stress. Many people find an identity—a sense of self—through their work. When they lose their job (or are afraid of losing it), they also lose their self-confidence, or belief in their own ability. This causes worry and depression. In Japan, for example, the daily newspaper *Asahi* reports a sudden rise in the number of businessmen who need psychological help for their clinical depression. However, this decrease in job security may not necessarily be something bad. It is true that these days, workers must be more flexible—able to change to fit new situations. But optimists claim that flexible people are essentially happier, more creative, and more — energetic than people who are rigid.

[4] Job Hopping

Jumping from job to job (or "job hopping") has always been more common in some professions such as building construction and not very common in other professions such as medicine and teaching. Today, job hopping is increasingly common in many fields because of globalization, technology, and a movement from manufacturing to services in developed countries. For example, people

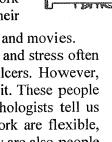

with factory jobs in industrial nations lose their jobs when factories move to countries where the pay is lower. The workers then need to upgrade their skills to find a new job. This is stressful but the new job is usually better than the old one. Because technology changes fast, workers need continuing education if they want to keep up with the field clearly, technology provides both challenge and opportunity.

Telecommuting [5]

In many ways, technology is changing the way people work. There are advantages and disadvantages to this. In some professions, for instance, telecommuting is now possible. People can work at home for some – or all – of the week and communicate by computer, telephone, and fax. advantage of this is that it saves them from the stress of commuting to the work place. It also allows them to plan their own time. On the other hand, it is difficult for some people to focus on work when they are at home. The refrigerator, TV, and their children often distract them. Telecommuters must have enormous discipline and organizational skills. Technology is changing the way people work in another way – in the use of cell phones, beepers, and pagers. There is an advantage: customers and clients have access to businesspeople at anytime, anywhere. However, there is also a drawback: many businesspeople don't want to be available day and night. They prefer to have a break from their work life.

Workaholism [6]

In the new millennium, as in the 1990s, workaholism will continue to be a fact of life for many workers. Workaholics are as addicted to their work as other people to drugs or alcohol. This sounds like a problem, but it isn't always. Some people overwork but don't enjoy their work. They don't have time for their family, friends, or leisure activities such as hobbies, sports, and movies.

These people become tired, angry, and depressed. The tension and stress often cause physical symptoms such as headaches and stomach ulcers. However, other people love their work and receive great pleasure from it. These people appear to be overworking but are actually very happy. Psychologists tell us that the most successful people in the changing world of work are flexible, creative, disciplined, and passionate about their work. But they are also people who make time for relaxing activities and for other people. They enjoy their work and enjoy time away from it, too.

After You Read

3.	Would you prefer telecommuting or travelling to work?
4.	Do you think you are a workaholic? If so, do you enjoy your work?

Getting a Job

Ш

Getting a job begins with locating and applying for jobs that will advance your career plans. It also involves convincing employers that you are the best applicant for their job openings. The way you apply for a job and present your qualifications can greatly influence an employers impression of you. Therefore, you should know how to contact employers, how to complete application forms, and how to make a good impression in job interviews. It is also important to know how to write a good resume, or summary of your background and qualifications. All these skills can improve your chances for employment. However, do not be discouraged if you are not offered the first job you apply for. Most employers consider several applicants for each job opening, and many people make a number of applications before being hired. Finding job opportunities. One of the most common ways to learn about job opportunities is by word-ofmouth. Many jobs are filled by people who have heard of the job openings from friends, relatives, teachers, and acquaintances. You should therefore tell the people you know and meet that you are looking for certain kinds of job opportunities. This process is known as networking.

Another common way to locate job opportunities is through the help-wanted section of newspapers. Many professional and union newsletters, journals, and other trade publications also carry advertisements for job openings. In numerous cases, the information given in help-wanted ads can help you decide whether to contact the employer.

Information about job openings is also available from employment agencies. Public employment agencies are run by the government and do not charge for their services. Private agencies charge the jobseeker or the employer a fee if a person is hired as a result of their efforts. Many high schools, colleges, and other schools have *placement offices*, which are set up to help students and graduates find jobs.

Telephone directories, the *College Placement Annual*, and other directories list the names and addresses of employers in various fields. Jobseekers must contact the employers to learn about possible job openings. **Contacting employers**. Your first contact with an employer will be either to apply for a known job opening or to find out if any jobs are available. Your contacts with employers should be effective and orderly. The most common ways of contacting employers are by mail, by telephone, and by personal visit to an employers office.

OUTSIDE ACTIVITIES:	Member of Society for Professional Journalists and lowa Newspaper Association; amateur radio operator; volunteer for United Way in Indianola
REFERENCES;	Personal references available on request

A résumé, above, briefly describes a job applicant's work experience, education, and interests. To be effective, a résumé should be neatly typed, well organized, and easy to read.

Many applicants for jobs get in touch with employers by mail. A letter to an employer should be typewritten. In the letter, introduce yourself and explain why you are writing. Briefly indicate any experience and skills you have that relate to the kind of job you are seeking. Finally, ask for an interview. Be sure to include your address and telephone number so that the employer can reach you. If you contact an employer by telephone, try to provide the same information that you would cover in a letter.

For some positions, job seekers make direct contact with employers by filling out job applications in person. Some businesses require that applications be on file before considering an applicant for employment. These employers include department stores, fast-food restaurants, supermarkets, retail sales outlets, automobile manufacturers, and clothing manufacturers. Many workers take resumes with them when they visit these employers. Resumes provide workers with the information they need to complete the application.

Writing a resume. A resume describes your background and qualifications in more detail than does a letter of application. It may be enclosed with such a letter or given to an employer before or during an interview. A good resume is neat, well organized, and easy to read. Most are about one or two pages long.

Next, list the names and locations of all schools and training programs you have attended since high school. Include your attendance dates and major subjects plus any degrees, diplomas, certificates, and honors you received. Finally, list any hobbies, travel experience, or other information that applies to the job you are seeking.

Many employers ask for the names and addresses of *personal references—that* is, people the employer may contact to learn more about you. Some job applicants list three or four personal references in their resumes. Other applicants indicate that such references are available on request.

Completing application forms. Most employers ask job applicants to fill out an application form. Such forms help employers find out about your qualifications. Application forms should be filled out carefully. Make your answers as brief, neat, and complete as possible.

Most application forms request the same kinds of information, and much of the information duplicates that given in resumes. The forms ask for your address, telephone number, social security number, and the title of the job for which you are applying. Most forms also ask about your previous employment, including your employers' and supervisors' names, the dates of your employment, and your duties. The forms further request that you list the schools you attended, the dates you attended them, and any degrees, diplomas, and certificates you received. Many forms request information about your military experience, health, and hobbies. They may also ask for the names and addresses of personal references.

Being interviewed. If your resume or application form indicates you are qualified for a job opening, the employer may ask you to come in for an interview. The interview enables you to learn more about the job opening. It also helps the employer find out if you are the best person to hire for the job.

Most interviewers pay close attention to the way an applicant acts, dresses, and answers questions. You can favorably influence an interviewer by arriving on time and by being polite, sincere, and well organized. Dress as you would for the kind of job you are seeking, unless the workers wear uniforms. The interviewer will probably ask about your interests, your work experience, and your goals. Common questions also include your reasons for applying for the job and what you believe you can contribute to the success of the employer's business. Answer all questions briefly and frankly. You might find it helpful to think out your answers to such questions before an interview.

Many people prepare for a job interview by trying to learn some facts about the employers business. Such facts might include information on the kinds of products the company manufactures or on the services it provides. This kind of knowledge can help you ask intelligent questions during your interview. It also shows the interviewer that you are interested in the employer's business.

After the interview, send a thank-you letter to the interviewer. If you still want to be considered for the job, say so in your letter. Also ask any further questions you might have.
